Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Human GIL-19 protein that shows a high degree of homology to IL

PT (interleukin)-10, useful in upregulation of humoral immune responses,
PT as an antiinflammatory agent and as a modulator of immune responses
PT associated with injury -
XX
PS Claim 9; Page 59-60; 60pp; English.
XX
CC The present invention provides the protein and coding sequences for the
CC novel human GIL-19/AE289 protein. The protein shows homology to
CC interleukin-10 (IL-10) and is assumed to be a cytokine. It can be used
CC in the regulation of cell proliferation and differentiation,
CC haematopoiesis, immune stimulation or suppression, tissue growth and
CC tumour inhibition. In addition, it also has uses in the treatment of
CC inflammation and in nutrition.

XX
PT New nucleic acid molecule encoding a T cell derived inducible factor
PT for treating asthma, an allergy or lymphoma
XX
PS Example 26; Fig 1; 46pp; English.
XX
CC This is the human T cell derived inducible factor (TIF). The gene
CC was mapped to chromosome 12q15. The human TIF was identified based on
CC homology to a murine TIF, which was identified by subtraction cloning
CC from a murine lymphoma cell line BW5147 in the presence or absence of
CC interleukin 9 (IL-9). BW5147, can be grown in vitro, without the need to
CC add any cytokines to its culture medium. Many IL-9 activities are
CC mediated by activation of STAT transcription factors. The novel TIFs were
CC expressed in the presence of IL-9, but not in its absence. TIFs induce
CC STAT activation in cells. They can be used, e.g. in the stimulation of
CC regeneration of targeted tissues. Their inhibitors or antagonists can be
CC used to retard, prevent or inhibit differentiation of other tissues. The
CC TIFs and their coding sequences are useful in the treatment of asthma,
CC allergies and lymphoma (claimed). They are also useful for identifying
CC compounds that inhibit or activate T cell induced factor activity in a
CC cell (claimed).

PT Novel human cytokine polypeptide, ZCYTO18, useful for treating cancer -
XX

PS Claim 4; Page 142; 167pp; English.
XX
CC The patent discloses novel human cytokine, ZCYTO18 protein and its
CC corresponding DNA. ZCYTO18 protein induces proliferation of cells
CC expressing zcytor11, a receptor for ZCYTO18 or induces cytotoxicity
CC in K5626 cells. ZCYTO18 DNA is useful for detecting a genetic
CC abnormality in a patient. ZCYTO18 DNA and its antibodies are useful
CC for detecting cancer and inflammation. ZCYTO18 protein is useful for
CC killing cancer cells. It is useful for increasing platelets in a
CC patient or injured tissue. It is also used in gene therapy.
CC The present sequence is novel human cytokine, ZCYTO18 protein.

PT New soluble cytokine receptor polypeptides and polynucleotides, useful
PT for diagnosing and treating cancer and inflammatory conditions -
XX
PS Example 17; Page 195-196; 210pp; English.
XX
CC The invention relates to a human cytokine receptor polypeptide,
CC designated zcytor16. The zcytor16 polypeptide can be expressed by
CC standard recombinant methodology and can bind to IL-TIF (undefined). The
CC zcytor16 protein is useful for: inhibiting IL-TIF induced proliferation
CC or differentiation of hematopoietic cell(s) (progenitors); reducing
CC IL-TIF induced or IL-9 induced inflammation; and suppressing an
CC inflammatory response in a mammal with inflammation. Heteromeric/
CC multimeric receptor polypeptides such as soluble zcytor 16/CRF2-4 can be
CC used to reduce progression and symptoms of cancer. Zcytor16 polypeptides
CC can also be used to detect IL-TIF levels which is indicative of
CC pathological conditions including inflammatory states (e.g. rheumatoid
CC arthritis) and cancer. Antibodies that bind zcytor16 polypeptides and the
CC polypeptides themselves are useful for the treatment of inflammation,
CC inflammatory diseases (e.g. infection, asthma, inflammatory bowel
CC disease, rheumatoid arthritis and atherosclerosis) and autoimmune
CC diseases. The antibodies and zcytor16 polynucleotides are also useful
CC for detecting cancer. The present sequence represents the human IL-TIF
CC protein.

PT   Eighty four nucleic acids encoding PRO polypeptides, useful in
PT   molecular biology, including use as hybridization probes, and in
PT   chromosome and gene mapping. -
XX
PS   Claim 12; Fig 154; 278pp; English.
XX
CC   The present sequence is a human PRO polypeptide (secreted and
CC   transmembrane). The PRO protein, and PRO agonists, PRO antagonists or
CC   anti-PRO antibodies are useful for preparation of a medicament useful in
CC   the treatment of a condition which is responsive to the PRO protein,
CC   agonists, antagonists or anti-PRO antibodies. The PRO protein may also be
CC   employed as molecular weight markers for protein electrophoresis. The PRO
CC   coding sequence has applications in molecular biology, including use as
CC   hybridisation probes, and in chromosome and gene mapping.

PT   Isolated nucleic acid molecule encoding a PRO polypeptide which is a
PT   transmembrane polypeptide is useful for gene therapy and identification
PT   of related polypeptides -
XX
PS   Claim 12; Fig 64; 244pp; English.
XX
CC   The present sequence represents a human secreted and transmembrane
CC   polypeptide. The specification describes human polypeptides, designated
CC   PRO196, PRO444, PRO183, PRO185, PRO210, PRO215, PRO217, PRO242, PRO288,
CC   PRO365, PRO1361, PRO1308, PRO1183, PRO1272, PRO1419, PRO4999, PRO7170,
CC   PRO248, PRO353, PRO1318, PRO1600, PRO9940, PRO533, PRO301, PRO187,
CC   PRO337, PRO1411, PRO4356, PRO246, PRO265, PRO941, PRO10096, PRO6003,
CC   PRO6004, PRO350, PRO2630 and PRO6309. The biological activity of cells
CC   can be modulated with agents that bind to these polypeptides, resulting
CC   in the death of the cells. The polynucleotides encoding these
CC   polypeptides are useful in the recombinant production of the
CC   polypeptides, as a hybridisation probe to screen libraries to isolate
CC   homologous sequences, or to map the gene. They may also be used for
CC   analysing genetic disorders, and to produce transgenic animals which are
CC   useful for the development and screening of therapeutically useful
CC   reagents. The polynucleotides can also be used in gene therapy e.g. to
CC   replace a defective gene.

PT New human extracellular signaling nucleic acids and polypeptides useful
PT for diagnosing, treating and preventing infections and
PT gastrointestinal, neurological, reproductive, and
PT autoimmune/inflammatory disorders -
XX
PS Claim 1; Page 94; 114pp; English.
XX
CC The invention provides human extracellular signaling molecules (EXCS)
CC and polynucleotides which identify and encode EXCS. EXCS can be
CC expressed by standard recombinant methodology. The amino acid and nucleic
CC acid sequences of EXCS are useful for diagnosing, treating and
CC preventing infections and gastrointestinal (peptic ulcer, dysphagia,
CC pancreatitis), neurological (e.g. epilepsy, ischemic cerebrovascular
CC disease, stroke), reproductive (infertility, ovulatory defects,
CC endometriosis), autoimmune /inflammatory (actinic keratosis, acquired
CC immunodeficiency syndrome (AIDS), Addison's disease), and cell
CC proliferative disorders including cancers (of the breast, adrenal gland,
CC bone). They may also be used to treat fatal familial insomnia,
CC nutritional and metabolic diseases of the nervous system, myopathies,
CC mental disorders (anxiety, schizophrenia, mood), as well as infections
CC caused by parasites (malaria, leishmania, trypanosoma), viral
CC (adenovirus, coronavirus, flavivirus), bacterial (e.g. pneumococcus,
CC staphylococcus, bacillus), and fungal (aspergillus, blastomyces,
CC dermatophytes) agents. The nucleic acids, polypeptides, antagonists,
CC agonists, pharmaceutical compositions, and antibodies may also be used
CC for treating or preventing disorders associated with increased or
CC decreased expression or activity of EXCS. EXCS polynucleotides may also
CC be used to detect and quantify gene expression in biopsied tissues in
CC which expression of EXCS may be correlated with the disease, to determine
CC presence or excess expression of EXCS, to monitor regulation of EXCS
CC levels during therapeutic intervention, to detect the presence of
CC associated disorders, as targets in microarray, to generate hybridization
CC probes, and to detect differences in gene sequences among normal, carrier
CC or affected individuals. Antibodies may also be used in diagnosing
CC disorders, in monitoring patients being treated with EXCS agonists,
CC antagonists or inhibitors. Sequences AAB48057-B48082 represent the EXCS
CC of the invention.

PT New Zcytor16 polypeptide useful for treating autoimmune or inflammatory
PT diseases, e.g. inflammatory bowel disease, rheumatoid arthritis,
PT asthma, atherosclerosis, cancer or diabetes, or in assessing
PT therapeutic aspects of IL-TIF -
XX
PS Disclosure; Page 197-198; 221pp; English.
XX
CC The invention relates to cytokine receptor designated as mouse Zcytor16
CC which can bind and antagonise the IL-TIF. The Zcytor16 polypeptide is
CC useful in modulating the immune system by binding Zcytor16 ligand, and

```
CC   thus, preventing the binding of the ligand with endogenous Zcytor16
CC   receptor. It is useful for studying human inflammation or immune
CC   function, or for treating autoimmune or inflammatory diseases such as
CC   inflammatory bowel disease, rheumatoid arthritis, asthma, systemic
CC   lupus erythematosus, myasthenia gravis or allergy, atherosclerosis,
CC   cancer, diabetes, glomerulonephritis or pancreatitis, or in assessing
CC   therapeutic aspects of IL-TIF, chemical therapeutics, anti-IL-TIF
CC   antibodies, anti-Zcytor16 antibodies or Zcytor16 soluble receptors.
CC   Zcytor16 DNA and the anti-mouse Zcytor16 antibody are useful as probes
CC   in detecting gene expression and gene structure, such as in the
CC   diagnosis and/or prevention of spontaneous abortions or in monitoring
CC   placental health and function. It is also used in gene therapy. The
CC   present sequence is human IL-TIF protein.

PT   activity in humans, e.g. septicemia, multiple sclerosis, ischemia,
PT   atherosclerosis, allergies  -
XX
PS   Claim 6; Page 10; 76pp; English.
XX
CC   The present sequence is the protein sequence of human
CC   interleukin-22 (IL-22), a cytokine involved in acute phase
CC   responses.  The invention provides inhibitors of IL-22, especially
CC   an antibody which immunologically reacts with an IL-22 protein,
CC   and particularly a humanised monoclonal antibody.  The anti-IL-22
CC   antibody, or other IL-22 modulator, is useful for treating a
CC   pathological condition in need of IL-22 modulation, or associated
CC   with IL-22 activity in a subject, particularly a human.  In
CC   particular, these conditions include septicaemia, autoimmune
CC   disorders (e.g. arthritis or rheumatoid arthritis, osteoarthritis,
CC   multiple sclerosis, myasthenia gravis, inflammatory bowel disease,
CC   lupus, diabetes or psoriasis), infectious diseases state (e.g.
CC   infection by bacteria, viruses, parasites or fungi), or the
CC   regulation of inflammation and acute phase responses (e.g. wound
CC   healing process, cholesterol metabolism, oxygen free radical injury,
CC   ischemia, atherosclerosis or allergies).  Modulators of IL-22
CC   activity are also useful for treating inflammatory pathology
CC   in the kidney (which is a result of necrosis due to ischemia)
CC   or cancer (e.g. renal cell carcinoma), or for remodelling kidney
CC   tissue (all claimed).  A subject's immune response to an antigen
CC   can be enhanced by administering the antigen and an
CC   immunogenicity-augmenting amount of IL-22.

XX
PT New isolated secreted and transmembrane PRO polypeptide useful for
PT modulating biological activity of a cell, or for treating
PT sports-related joint problems, osteoarthritis or rheumatoid arthritis
XX
PS Claim 20; Fig 154; 399pp; English.
XX
CC The invention relates to an isolated secreted and transmembrane PRO
CC polypeptide having 80 % sequence identity to a sequence appearing
CC as ABG95851-ABG95934 or their associated signal peptide, or a sequence of
CC an extracellular domain of the proteins with their associated signal
CC peptide or lacking its associated signal peptide. Also included are
CC the nucleic acids encoding the proteins, vectors, host cells,
CC fusion proteins and antibodies which specifically bind to the proteins.
CC The proteins are useful for detecting a polypeptide designated as A, B, C
CC or D in a sample suspected of containing an A, B, C or D polypeptide,
CC by contacting the sample with a polypeptide designated as E, F, G, H or
CC I (or vice versa) and determining the formation of a A/E, B/F, B/G, C/H
CC or D/I polypeptide conjugate in the sample, where the formation of the
CC conjugate is indicative of the presence of an A, B, C or D polypeptide
CC in the sample, where A is a PRO10272 polypeptide, B is a PRO20110
CC polypeptide, C is a PRO10096 polypeptide, D is a PRO19760 polypeptide,
CC E is a PRO5801 polypeptide, F is a PRO1 polypeptide, G is a PRO20040
CC polypeptide, H is a PRO20233 polypeptide and I is a PRO1890
CC polypeptide. The sample comprises a cell suspected of expressing the A,
CC B, C or D polypeptide. The E, F, G, H or I polypeptide is labeled with
CC a detectable label or is attached to a solid support. The proteins are
CC useful for linking a bioactive molecule to a cell expressing a
CC polypeptide designated as A, B, C or D or E, F, G, H or I. The bioactive
CC molecule is a toxin, a radiolabel or an antibody. The bioactive molecule
CC causes death of the cell. A, B, C, D, E, F, G, H, or I, or antibodies
CC against them are useful for modulating a biological activity of a cell
CC expressing a polypeptide designated as A, B, C or D or E, F, G, H, or
CC I. The cell is killed. The proteins are useful for identifying
CC agonists or antagonists, for the preparation of a medicament useful in
CC the treatment of a condition which is responsive to the proteins, as
CC molecular weight markers for protein electrophoresis purposes, and as
CC therapeutic agents for treating sports-related joint problems,
CC articular cartilage defects, osteoarthritis or rheumatoid arthritis.
CC Nucleic acids encoding the proteins are useful as hybridisation probes,
CC in chromosome and gene mapping, in the generation of anti-sense RNA and
CC DNA, for the preparation of the proteins, to generate transgenic or
CC knockout animals which are useful in the development and screening of
CC therapeutic useful reagents, for chromosome identification, and in gene
CC therapy. The antibody is useful as a therapeutic agent, in a diagnostic
CC assay and for affinity purification of the protein from recombinant
CC cell culture natural sources. The present sequence represents a novel
CC secreted or transmembrane protein of the invention.

PT New soluble cytokine receptor which binds interleukin-T-cell inducible
PT factor and antagonizes its activity in inflammatory and immune diseases
PT such as cancer, diabetes, asthma, sepsis, psoriasis and autoimmune
PT diseases -
XX
PS Example 1; Page 98; 117pp; English.
XX
CC This invention relates to the protein and cDNA sequences of a novel
CC soluble cytokine receptor polypeptide designated zcytorII, which binds
CC interleukin-T-cell inducible factor (IL-TIF) or antagonises IL-TIF
CC activity. The protein of the invention is useful for reducing IL-TIF-
CC or IL-9 induced inflammation, and inhibiting IL-TIF-induced
CC proliferation. The protein is also useful for suppressing an immune
CC response in a mammal exposed to an antigen or pathogen. Soluble zcytorII
CC receptor or heterodimeric polypeptide is useful for enhancing the in
CC vivo killing of target tissues by directly stimulating a zcytorII
CC receptor-modulated apoptotic pathway. IL-TIF is involved in promoting
CC Th1-type immune responses and antagonists of IL-TIF have beneficial use
CC against diseases involving such immune responses. Soluble zcytorII
CC heterodimers are useful as antagonists in inflammatory and immune
CC diseases or conditions such as pancreatitis, type I diabetes (IDDM),
CC pancreatic cancer, Graves disease, inflammatory bowel disease (IBD),
CC Crohn's disease, colon and intestinal cancer, diverticulosis, autoimmune

```
CC   disease (e.g. IDDM, multiple sclerosis (MS), systemic lupus
CC   erythematosus (SLE), myasthaenia gravis, rheumatoid arthritis and IBD),
CC   sepsis, asthma,allergy and other atopic diseases, psoriasis and kidney
CC   dysfunction. Soluble zcytorII receptor or heterodimeric receptor
CC   polypeptides are useful in vivo or in diagnostic applications to detect
CC   IL-TIF expressing cancers in vivo or in tissue samples and to prepare
CC   antibodies. ZcytoRII serves as a target for MAb therapy of cancer where
CC   an antagonising MAb inhibits cancer growth and targets immune-mediated
CC   killing. The present sequence represents the interleukin-T-cell
CC   inducible factor (IL-TIF) protein, the activity of this protein is
CC   inhibited by the ZcytoRII protein of the invention.

CC   The present invention relates to a new polypeptide having at least 80%
CC   identity to a 101 amino acid interleukin (IL)-22 sequence. The invention
CC   is useful for detecting IL-22R (IL-22 receptor) or IL-10Rbeta polypeptide
CC   in a sample which involves contacting sample with an IL-22 polypeptide
CC   and determining the formation of an IL-22R/IL-22 polypeptide conjugate or
CC   an IL-10Rbeta/IL-22 polypeptide conjugate. Preferably, the IL-22
CC   polypeptide is labelled with a detectable label or is attached to a solid
CC   support. The polypeptide is also useful for linking a bioactive molecule,
CC   e.g. toxin, radiolabel or antibody that causes the death of the cell, to
CC   a cell expressing IL-22R polypeptide or IL-10Rbeta polypeptide which
CC   involves contacting the cell with IL-22 polypeptide that is bound to the
CC   bioactive molecule and allowing binding of the IL-22 polypeptide with
CC   IL-22R or IL-10Rbeta polypeptide thus linking the bioactive molecules to
CC   the cell. The molecules of the invention can also be used for modulating
CC   biological activity of cell expressing IL-22R or IL-10Rbeta polypeptide,
CC   whereby the cell is killed and the antibody of the invention is useful
CC   for inhibiting IL-22 induced expression of PAP1 (pancreatitis associated
CC   protein) by pancreatic cells. The antibody is also useful for treating a
CC   pancreatic disorder such as acute or chronic pancreatitis, pancreatic
CC   carcinoma including acinar cell carcinoma or mixed cell population
CC   pancreatic carcinoma and for reducing the activated or inflamed condition
CC   of the pancreas in a mammal. The present amino acid sequence represents
CC   the human interleukin 22 (IL-22) protein of the invention.

PT One hundred and eighty seven nucleic acids encoding PRO polypeptides,
PT useful in diagnosis and treatment of cardiovascular (e.g. myocardial
PT infarction), endothelial or angiogenic disorders in a mammal -
XX
PS Claim 11; Fig 354; 565pp; English.
XX
CC ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to
CC ABB85003. The PRO proteins and polynucleotides have cardiant, cytostatic,
CC antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic
CC activities, and can be used in gene therapy. The PRO polynucleotides,
CC proteins, agonists and antagonists are useful for treating or diagnosing
CC a cardiovascular, endothelial or angiogenic disorder in a mammal,
CC e.g. cardiac hypertrophy, trauma, cancer, age-related macular
CC degeneration, atherosclerosis, hypertension, arterial restenosis,
CC rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis,
CC lymphangitis, tumour angiogenesis (such as breast carcinoma and liver
CC carcinoma) and wound healing. The PRO polynucleotides have applications
CC in molecular biology, including use as hybridisation probes, and in
CC chromosome and gene mapping. ABL88259 to ABL88267 represent primers and
CC probes used in the exemplification of the present invention.

PT Stimulating expression of STAT transcription factor and inducing
PT production of acute phase protein in a cell, involves contacting a cell
PT capable of expressing STAT with T cell derived inducible factors -
XX
PS Disclosure; Page 64; 64pp; English.
XX
CC The invention relates to nucleic acid molecules encoding T cell
CC derived inducible factors (TIFs) also known as interleukin-21 (IL-21).
CC TIF polynucleotides are upregulated by the cytokine, IL-9. IL-TIF or
CC IL-21 molecules are implicated in activation of STAT transcription
CC factors, acute phase proteins and inflammation. The present sequence
CC is human TIF protein. The TIF gene is located on chromosome 12.
